# Marathon Pipe Line – Operating Map

# Operations Center

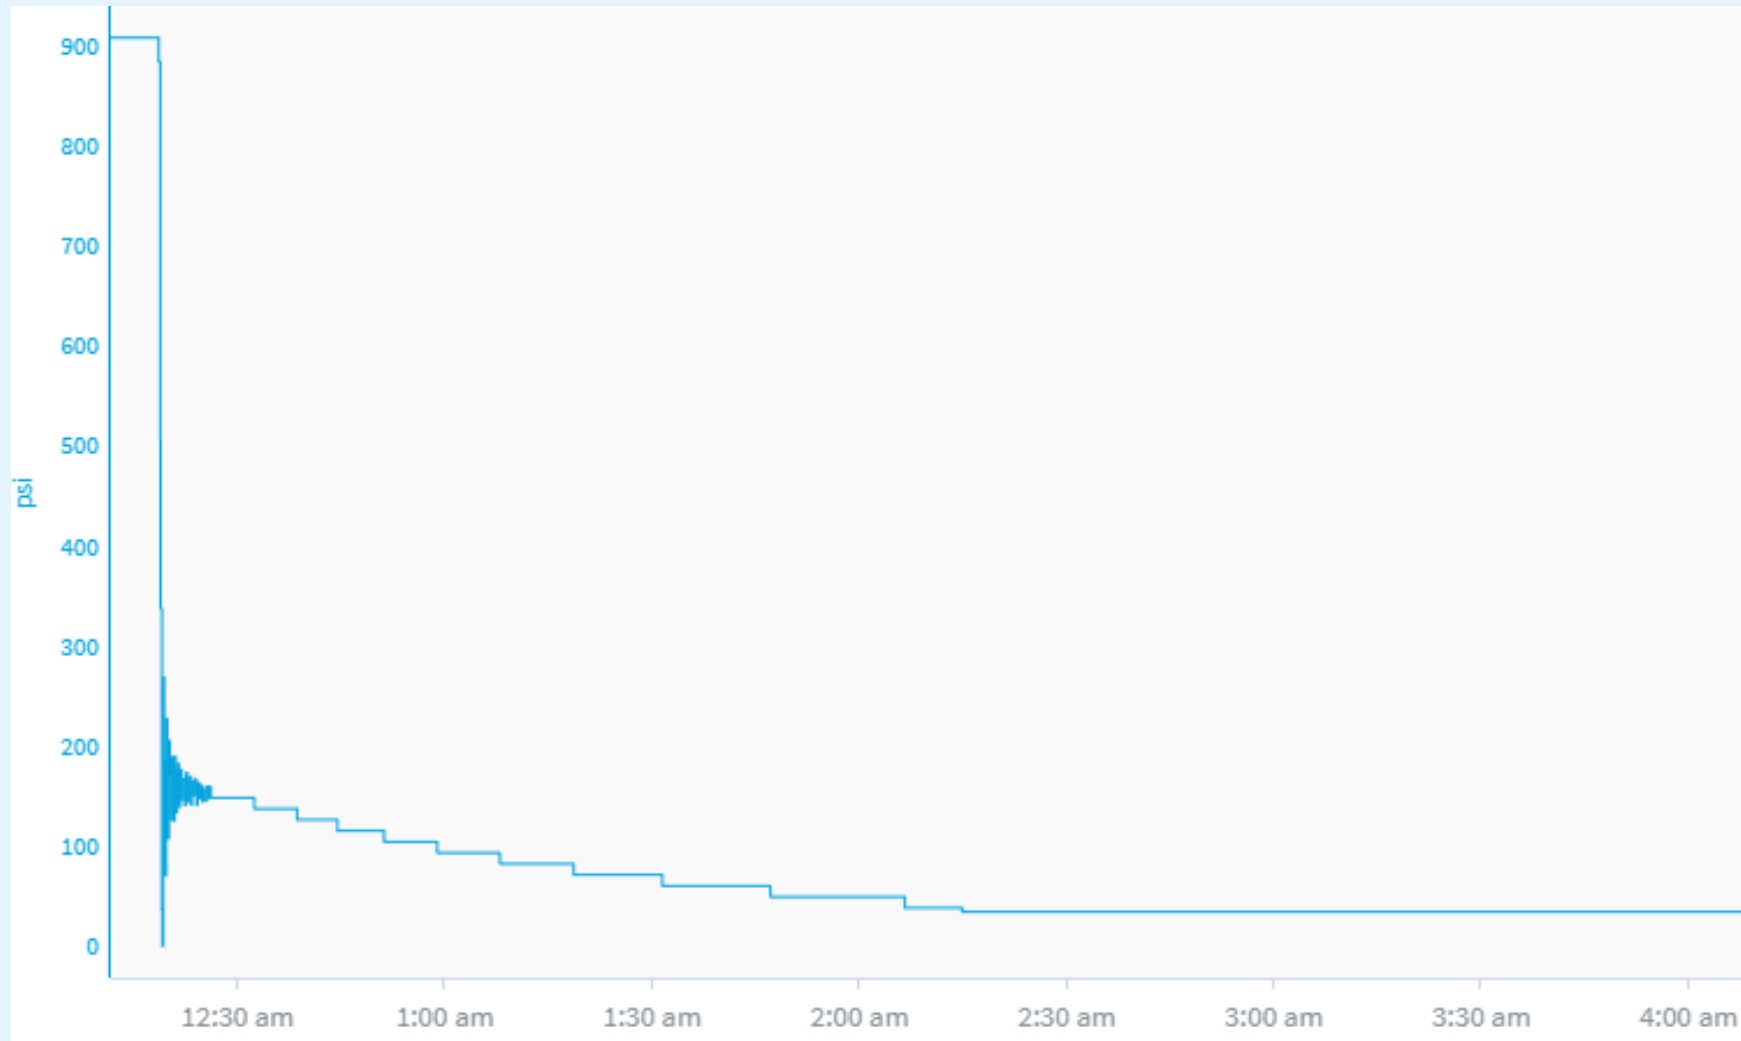

# Pipeline Leak Detection

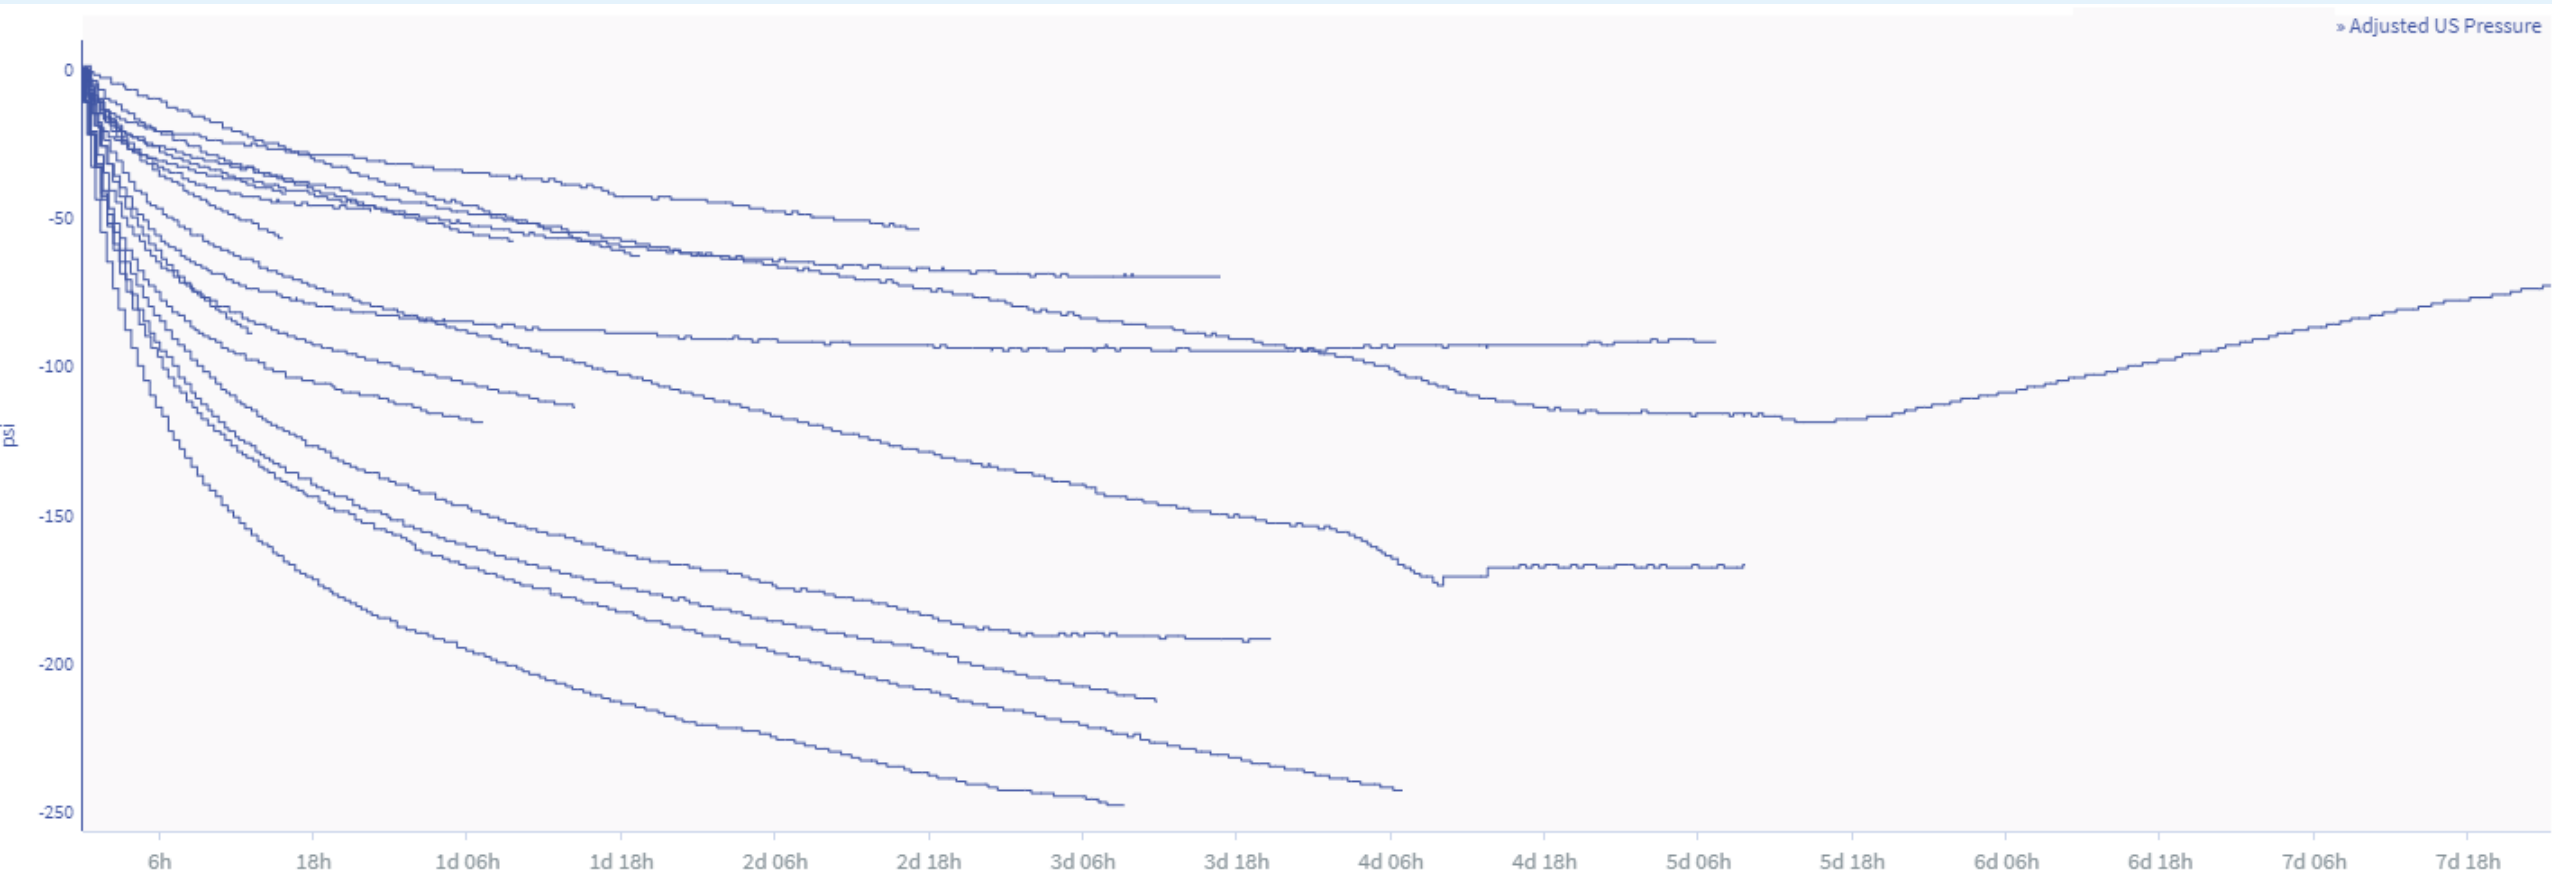

- Not just *barrels in* minus *barrels out*
- Pressures, temperatures, elevations, soil, fluid properties are all relevant
- 1°F will drop 50+ psi

# Am I Worried About This?

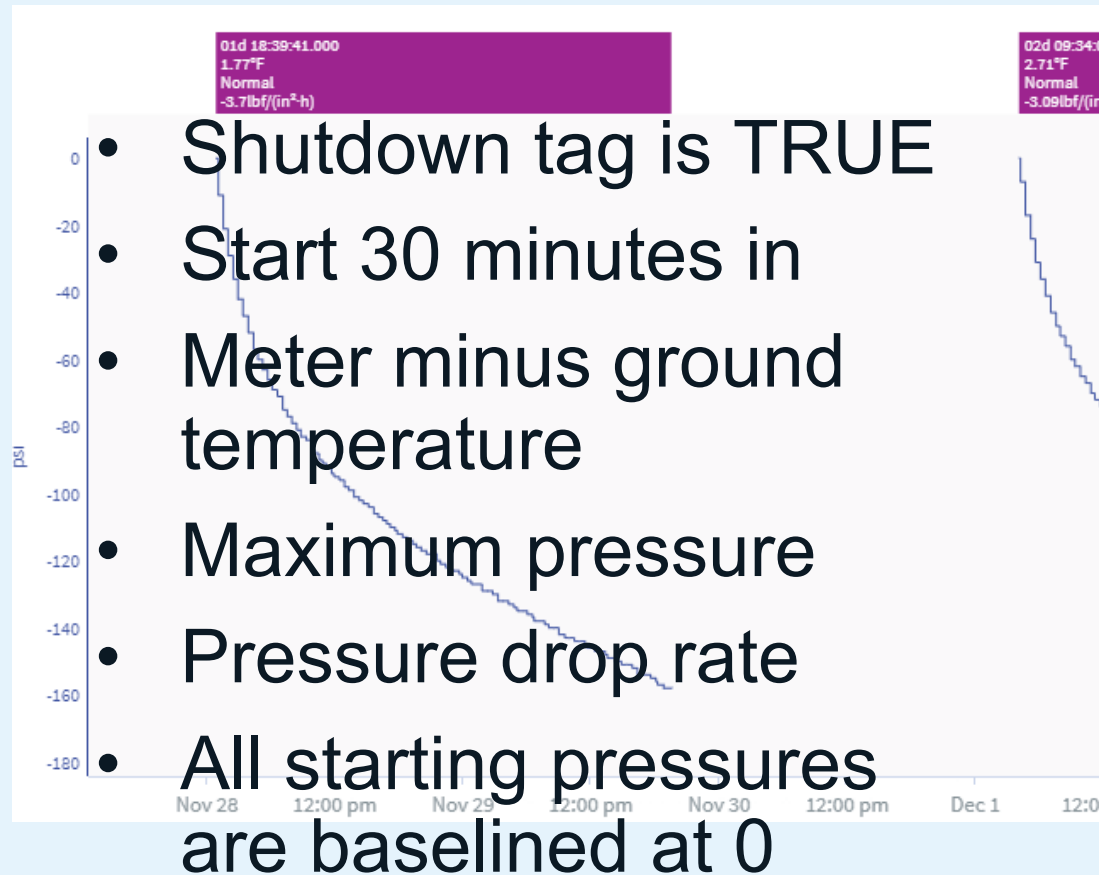

# Seeq to the Rescue!

# What's in the Condition?

fx Super Awesome Shutdown

Variables

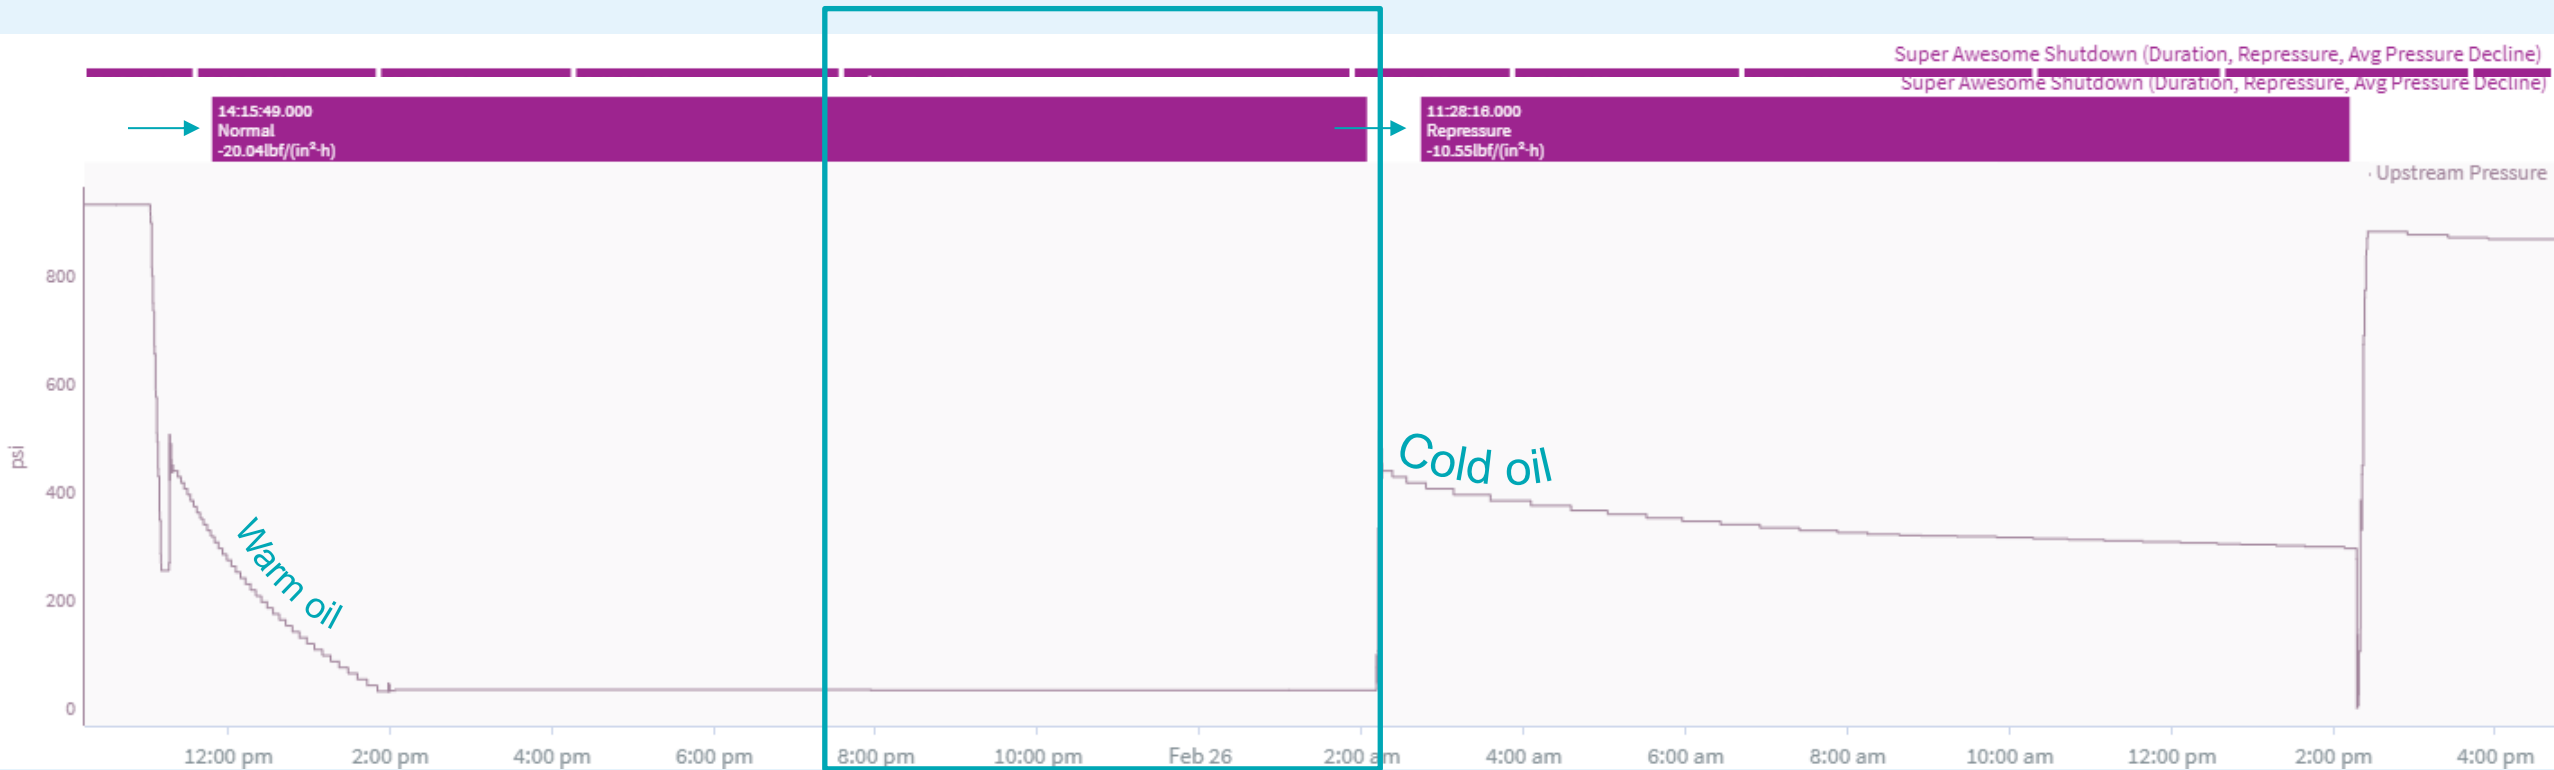

Name	Item
Sup	Upstream Pressure (psi)
\$ss	Segment Shutdown
\$gmt	Ground - Meter Temperature (°F)

Formula

```
1 //Define the shutdown condition, starting 30 min in and ending 5 min early
2 $condition = ($ss.setMaxInterpolation(10d) == 1).move(30min,-5min)
3 .removeLongerThan(10d)
4
5 //Definition of custom signals to be aggregated below
6 $pressureDeriv = $up.agileFilter(9s,5min).derivative('hr')
7 $repressSignal = 'Repressure'.splice('Normal',($ss == 0).removeShorterThan(60min).move(35min))
8
9 //Aggregations across the shutdown condition
10 $pDerivAvg = $pressureDeriv.aggregate(average(), $condition, durationKey()).round(2)
11 $startTemp = $gmt.aggregate(maxValue(), $condition, startKey()).round(2) * -1
12 $maxPressure = $up.aggregate(maxValue(), $condition, durationKey()).round(1)
13 $runProperty = $repressSignal.aggregate(startValue(), $condition, durationKey())
14
15 //Setting properties to the capsule
16 $condition.setProperty('Avg Pressure Decline',$pDerivAvg, average())
17 .setProperty('Max P',$maxPressure, maxValue())
18 .setProperty('Meter Minus Ground Temp',$startTemp,maxValue())
19 .setProperty('Repressure',$runProperty,startValue())
```

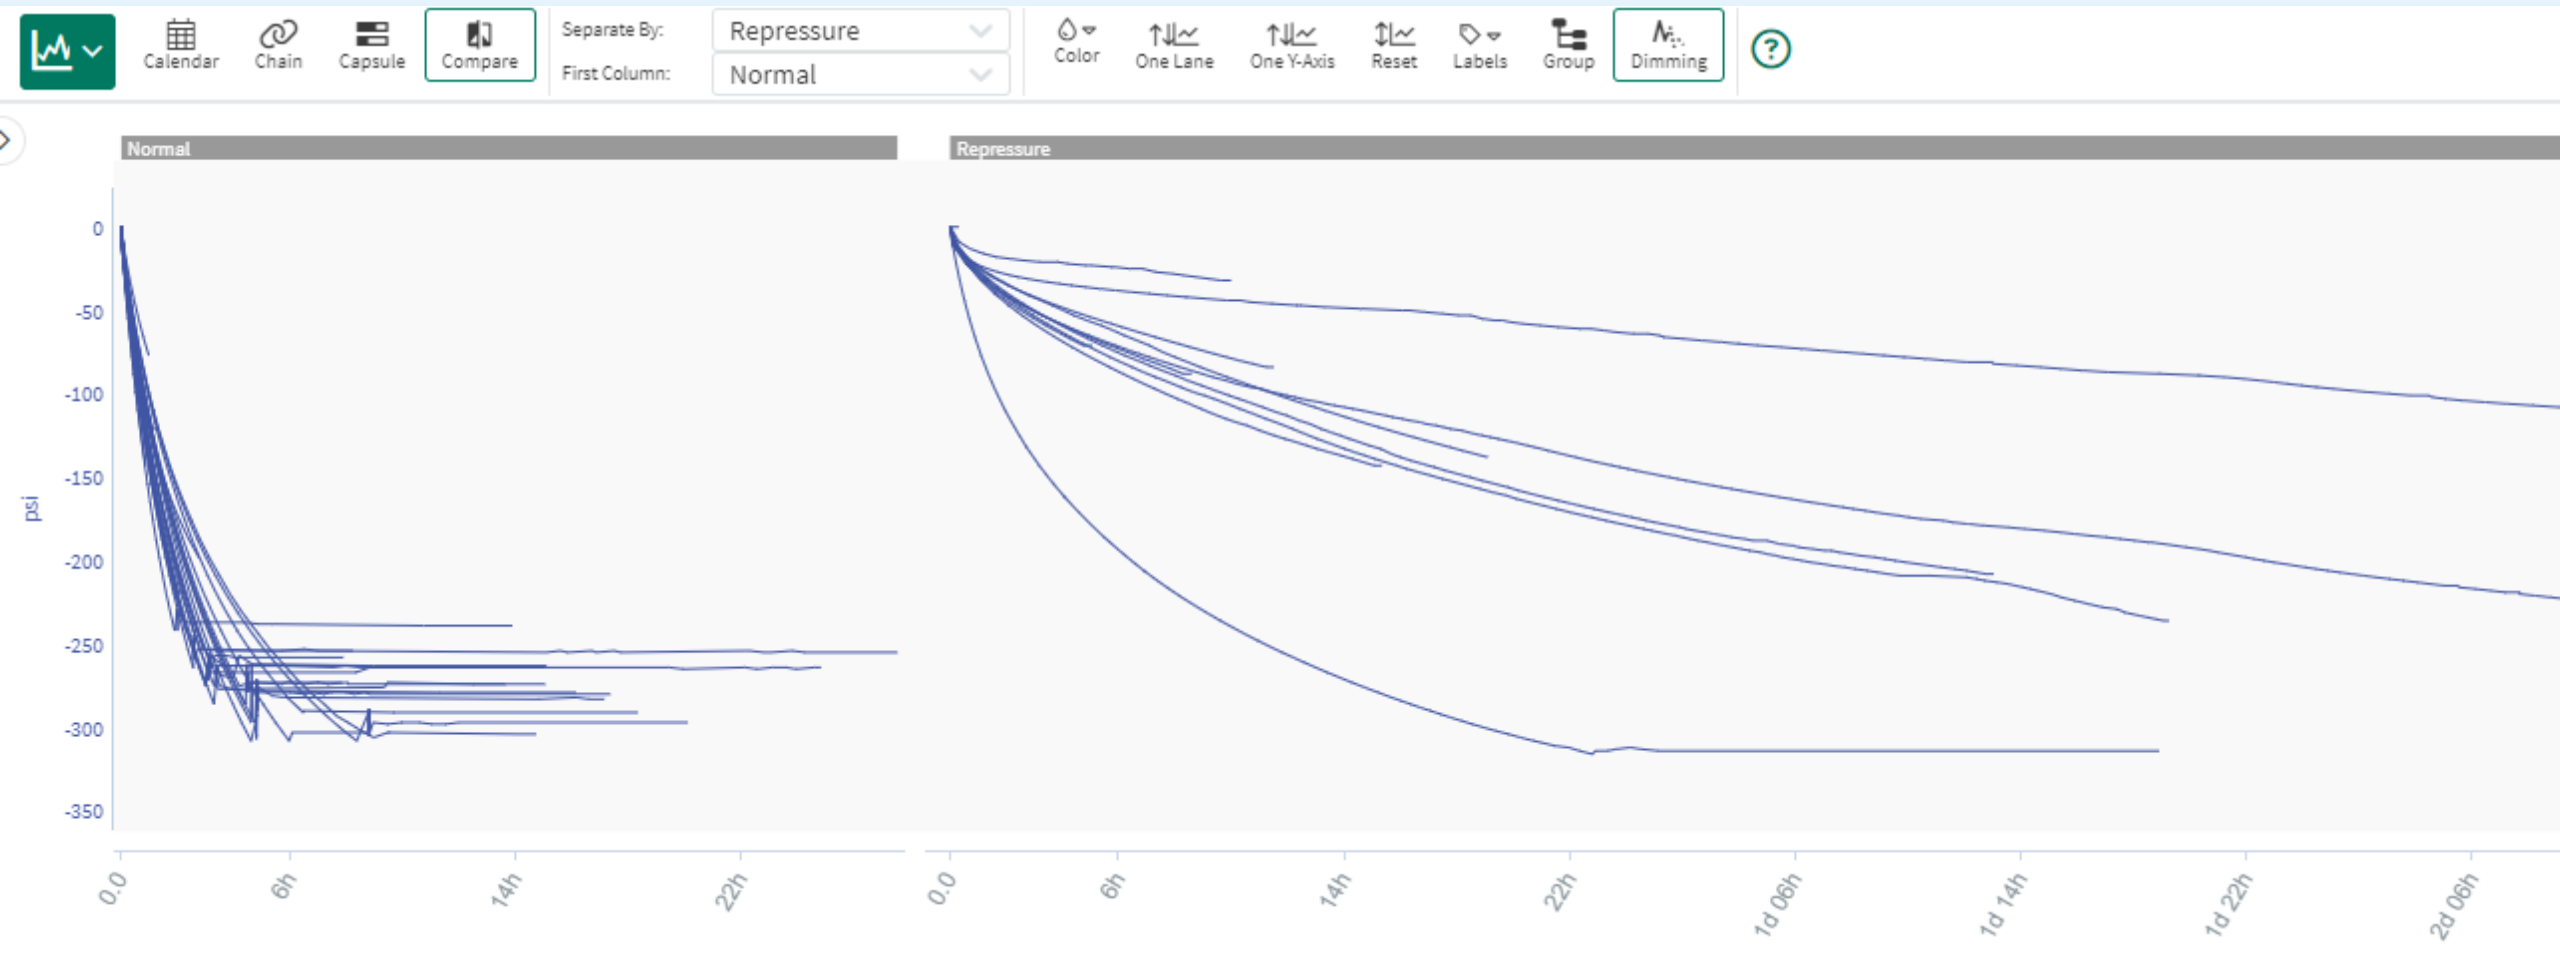

# Who Doesn't Belong?

# Shutdown Classification Using Splice( )

```
'Repressure'.splice('Normal',($ss == 0).removeShorterThan(60min).move(35min))
```

*Had it been running for at least an hour? = Normal*

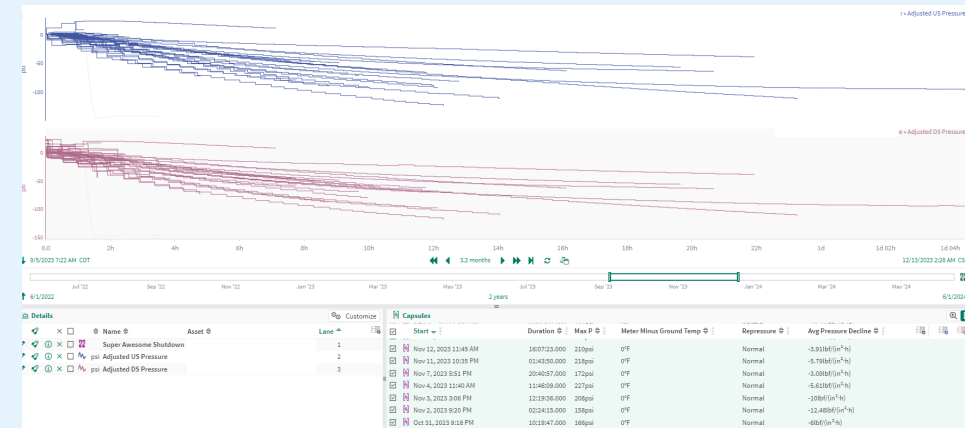

# A Quantum Leap

## BEFORE

- Combing historical shift reports
- Ad-hoc SCADA trending
- A clunky BI tool

## AFTER

- 120+ segments built-out by super users
- Adoption by the end users
- Be the safest operator we can be! Protect the public!

# Thank You
